

Segregation statistics for all districts in California

Exposure rates

In this report we used exposure statistics to measure segregation and to capture the experiences of segregation. Exposure of certain racial groups to one another or to majority groups shows the distribution of racial groups among organizational units – districts in this report – and describes the average contact between different groups. It is calculated by employing the percentage of a particular group of students of interest in a small unit (e.g., school) with a certain group of students in a larger geographic or organizational unit (e.g., district, county, or state). The formula for calculating the exposure rates of a student in racial group A to students in racial group B is:

$$P^* = \sum_{i=1}^N \frac{a_i b_i}{A t_i}$$

- where n is the number of small units (e.g., school) in a larger unit (e.g., district)
- a_i is the number of student in racial group A in the small unit i (school i)
- A is the total number of students in racial group A in the larger unit (district)
- b_i is the number of students in racial group B in the small unit i (school i)
- t_i is the total number of students in all racial groups in the small unit i (school i)

Exposure rates files for all districts in California

Our report contains exposure statistics for top twenty large districts in California, but given the length of the report, we did not offer exposure rates for all districts. Instead, our supplementary documents include exposure statistics for all districts in California for three different time periods: 1993-1994, 2002-2003, and 2012-2013. We also focus on the following exposure statistics to reveal segregation by race and ethnicity and by poverty:

1. Racial group exposure to low-income students by typical student in school districts
2. Racial group exposure to African American, Latino, and American Indian students by typical student in school districts
3. Racial group exposure to white and Asian students by typical student in school districts

How to read tables?

Let's take the table of racial group exposure to low-income students by a typical student for example. The table below indicates that a typical white student attends a school with 47.7 percent low-income students in the ABC Unified District, whereas a typical Latino student is in contact with 65.8 percent low-income students in school in the same district. The full report and lists showing segregation by district for all districts in California are available at www.civilrightsproject.ucla.edu

Racial Group Exposure to Low-Income Students by Typical Student in School Districts in CA

District	Total Enrollment	White	Asian	White/Asian	Black	Latino	Black/Latino/AI
ABC Unified	20,845	47.7%	36.5%	38.3%	53.5%	65.8%	63.6%

Racial Group Exposure Rates to Black/Latino/American Indian Students by Typical Student in School Districts in California, 2012-2013

District	Total Enrollment	White	Asian	White/Asian	Black	Latino	Black/Latino/ American Indian
